

The American Institute of Architects Continuing Education System

AIA/CES Registered Provider Program Summary Handout

Provider: Stego® Industries, LLC
Program #: STEGO
Program: Vapor Barriers: Nuisance or Necessity?

Length: 1 Hour
Credits: 1 LU Hour
Health Safety Welfare: Yes

Description: Now is an important time to become educated on the latest issues concerning below slab moisture. New EPA regulations, ACI recommendations, and ASTM standards are just a few reasons why a “state of the industry” is needed. Our firm specializes in below slab moisture protection, which has allowed us to acquire and examine the latest information from industry experts and forensic analysis that point to a number of problems caused by below slab moisture, regardless of the climate in which the project is located. We will discuss everything from the science of moisture migration to the latest developments in moisture testing. This seminar has been an effective educational tool for thousands of architects, engineers, and spec writers across the country, and hopefully Stego can be of service to your firm. If you would like more information aside from what is stated above, feel free to call the numbers listed below.

Learning Objectives: After attending the session, attendees will know how to design an overall system to help prevent moisture related problems such as: floor covering failures, mold and mildew issues, concrete drying concerns, and much more. Attendees will learn about the most recent standards and industry-expert recommendations in the Vapor Barrier industry. In addition, attendees will know and be able to explain the difference between a Vapor Retarder and a Vapor Barrier and know how to specify each.

How Taught: The CES facilitator uses a PowerPoint presentation (all that is required is electrical power and a screen or blank wall) to provide an in-depth look at moisture-related problems from below-slab sources, and does so in more of a discussion-oriented format.

Target Audience: Architects, engineers, specifiers, owners, and contractors; anyone who specifies products, installs products, or provides the funds for projects would benefit from the seminar. The presentation can accommodate any number of attendees at all experience levels.

Facilitator Qualifications: All Stego Industries CES facilitators have been trained on CES guidelines and are highly knowledgeable in the field of below-slab moisture protection. They are continually learning the latest theory for design and implementation of overall below-slab moisture protection systems.

Costs: There is no cost to bring this program into your firm or chapter meeting.
